A game warden in charge of a bear population is troubled. One of a family of 4 bears is stealing potato salad from picnickers. Based on the warden’s observations, can you find the name and color of the culprit?

1. The bears are named Wilbur, Bob, Sally, and Jane. They are brown, black, cinnamon, and gray, not necessarily in that order. The bears also have strange dietary habits. One of them likes only fish, another eats only berries and nuts, the third is a vegetarian (no meat or fish), while the last one eats anything.
2. The warden has seen the black and brown bear by the river eating fish. The gray bear will eat apples out of the warden’s hand.
3. Wilbur and Sally do not like nuts or berries.
4. The gray and brown bears are female.
5. Jane eats fish, but it is not her favorite dinner.
6. A bear who would eat potato salad would have to be willing to eat absolutely anything!
